## Option #1

Use this config when OEM KTM side cases and racks are installed.

**Optional:** Use this config minus the spacers for a low profile install. Note that you will not be able to install RotopaX or some other luggage accessories like this.

- Option #1, install AltRider rack directly on top of OEM rack. First place the (4) 22.2mm spacers in the (4) small indentations on the OEM rack.

## Option #2

- Option #2, install rack with no OEM rack or grab handles. Remove the OEM rack and grab handles by using a T40 driver to remove the (4) OEM bolts.

- Place the AltRider rear rack on top of the spacers and insert the Two(2) M8 x 45mm bolts and two(2) M8 x 50mm bolts. Use thread locker, and tighten in alternating pattern to 15Nm.

- Place the AltRider provided space combo as shown with 8mm angled spacers stacked on top of 22.2 mm spacers closest to the seat, and 25mm sloped spacers nearest the back of the tail. Low point of the spacer should face forward (towards the seat).

- ③ Place the AltRider rack over the spacers. Use thread locker. Insert the two(2) M8 x 50mm bolts in the front holes (A). Insert the two(2) M8 x 45mm bolts in the rear two holes(B). Torque to 15 Nm.

- ② TIP: Use a dab of thick grease to help hold the spacers in place. Start one M8x70mm bolt until it is inserted a few threads, but still loose. Then start the second M8x70mm bolt, keeping it loose too.

## Option #3

- ① DSU i [fZ YdST ZS' VWø  
Front is a stack of 22mm straight spacer (A) plus 8mm angled spacer.(B)  
Rear is 25mm angled spacer.(C)

- ③ Repeat steps 2 and 3 with the next grab handle. Once all (4) bolts are in place loosely, check the angled spacer alignment and turn by hand to the correct position if needed. Torque the bolts to 15 nm.
