Rev 3.0  
MADE IN THE USA

Kit:

- ① Radiator Guard

Tools necessary:

- ① t-25 Torx tool
- ② blue thread locker

- ① Use a T-25 torx tool to remove the (2) OEM lower fairing fasteners on the left and right of the lower fairing.

- ② Use a thin tool (a 3mm allen tool or t-8 torx tool will work) to push the centers of the plastic toggle clips through. Pay attention to where they go, they have a tendency to shoot out. Remove only the front left and right corner toggles, no need to remove the center one. You can now remove the lower fairing and set it aside.

- ③ Using a t-25 torx tool, remove the (2) OEM fasteners holding the bottom of the plastic fairing to the oil cooler, note the long shoulder on these fasteners, they are meant to be used with the thick rubber grommets.

- ④ Using a t-25 torx tool, remove the upper (2) OEM fasteners (with shoulders) as well.

- ⑤ Flex the plastic fairing out, you can now see the lower mount tabs for the oil cooler. Using the t-25 tool, remove the (2) OEM lower mounting fasteners (without shoulders) which attach the oil cooler to the radiator.

- ⑥ Place the radiator guard over the radiator but underneath the rubber grommets of the plastic fairing tabs, get (1) of the OEM fasteners started and then the other, do not tighten them down yet.

- ⑦ Stack the oil cooler mounting tabs over the radiator guards' mounting tabs. After applying a drop of thread locker to the last couple of threads of each OEM fastener (with no shoulder) Use a t-25 tighten these (2) fasteners all the way.

- ⑧ Using a t-25 tool, go back around to each of the mounting points and tighten them, making certain that everything lines up correctly before tightening all the way. Replace the lower plastic fairing and you are ready to ride.
