Rev 1.0
MADE IN THE USA

**Kit Contents:**

- ① aluminum guard
- ② isopropyl surface prep pad

**Recommended Tools:**

- ① 4mm allen tool
- ② 1/4" driver (shown w/optional ratchet extension)

- ① Use a 4mm allen tool to remove the (3) OEM fasteners which hold the plastic oil cooler shroud in place. You will reuse these fasteners.

- ② Before peeling the backer off of the high temp VHB adhesive, place the guard over the now exposed oil cooler to get a feel for how it will fit. You will want a small gap of 1-2 mm between the cooler fins and the guard once installed.

- ③ Set the guard aside, using the included isopropyl surface prep pad, clean the top and bottom surfaces of the oil cooler so that no oil, dirt or debris are present. This will ensure the best bond of the high-temp adhesive.

- ④ Peel off the backer for both strips of adhesive and carefully place the guard over the cooler. Maintain the 1-2mm gap between the guard and the oil cooler's fins, press down on the top and bottom flanges as shown above to secure the tape to the oil cooler. Put the plastic shroud back on using a 4mm allen tool and your installation is complete!

CONGRATULATIONS!

You've completed your installation. If at any point you have questions about your installation or have any feed back for us, we'd love to hear it. A downloadable version of these instructions can be found at our web site. www.AltRider.com

After 5 hours of riding, or 100 miles, check all the fasteners on the assembly to ensure they are tightened to spec.
