REV 2.0
MADE IN THE USA

**Kit:**

- ① (qty 2) M6 washer
- ② (qty 4) M6 x 12 flat head screw
- ③ (qty 2) M6 x 12 button head screw
- ④ Left large bracket
- ⑤ Right large bracket
- ⑥ Left small bracket
- ⑦ Right small bracket

**Required Tools:**

- ① 5mm hex allen tool
- ② 4mm hex allen tool
- ③ Extension
- ④ Ratchet
- ⑤ Thread locker

- ① Use 5mm hex allen tool and remove six (qty 6) OEM fasteners from the front fender. Remove and save the shoulder washers. Save all for reinstallation.

- ② (A) Unclip the left side cover. Note how it goes together for reinstallation. (B) Move the ABS sensor wire (if equipped) as shown, by inserting the rubber grommet in a slightly lower position in its plastic clip. This gives additional length to the wire needed. Clip the cover back in place.

- ③ Attach the Right and Left small upper brackets. Add a drop of loctite to each screw. Insert the flat head screw and screw tight to 6 Nm. Note location of anti-rotation tab, be sure it is snug against the top edge of the mounting arm. This tab prevents the rear edge of the fender from moving closer to the tire tread. If needed, use pliers to hold it in place as you tighten the screw.

- ④ (A) Attach the Right and left large lower brackets. Add a drop of loctite to each screw. Insert the flat head screw in the upper position and the button head screw with washer in the lower position. Be sure on the left side to route the ABS wire under the bracket, between the mounting bosses. (B) Reinstall the fender using the OEM fasteners from step 1 with their shoulder washers.

CONGRATULATIONS!

You've completed your installation. If at any point you have questions about your installation or have any feed back for us, we'd love to hear it. A downloadable version of these instructions can be found at our web site. www.AltRider.com

After 5 hours of riding, or 100 miles, check all the fasteners on the assembly to ensure they are tightened to spec.
